

Market: Municipal, Utilities

Client: CDM Smith

Owner: JEA

Project Profile

This project included a grade-supported pump pad and a single-story electrical building. MAE provided geotechnical investigation and design recommendations along with environmental services to acquire necessary permitting. The geotechnical exploration was performed to evaluate the general subsurface conditions within the areas of the proposed pump station improvements, to provide recommendations for foundation support and stormwater management design, and to provide recommendations for site preparation during construction.

Services: Geotechnical Engineering, Environmental Consulting
